OSHA has estimated that more than 32 million workers are exposed to over 650,000 hazardous chemical products in more than 3 million American workplaces. This poses a serious problem for exposed workers and their employers.

The basic goal of a Hazard Communication Program is to make sure employers and employees know about potential work hazards, how to recognize them and, most importantly, how to protect themselves. This seminar is designed to help reduce the possible incidence of chemical source illness and injuries.

Due to our database and network, we can also play a vital role in assisting in the development of the following:

- Chemical Information List.
- Material Safety Data Sheets.
- Labels (where necessary).

Course Length approximately 2.0 Hours
